

ClimateCraft Granted First OSHPD Special Seismic Certification Pre-Approval For Custom Air Handling Units

FOR IMMEDIATE RELEASE

OKLAHOMA CITY, OK, May 25, 2010 - ClimateCraft is pleased to announce that the company's CAH line of custom air handlers has been added to the "Facilities Development Division (FDD) List of Equipment/Components with OSHPD Special Seismic Certification Pre-Approval (OSP)."

The FDD list is administered by the California Office of Statewide Health Planning and Development (OSHPD). An OSP pre-approval allows owners, engineers, and contractors of health care facilities in California to specify, purchase, and install ClimateCraft CAH custom air handlers in compliance with the seismic requirements of the California Building Code (CBC) and be accepted by OSHPD during its statutory design review and inspection of construction projects.

ClimateCraft, Inc. is the first and only manufacturer to have custom central station air handling units on this list. This approval provides healthcare facility owners with the peace of mind that their air handling equipment will not delay the approval and opening of their facility.

The special seismic certification number is OSP-0063-10 and can be viewed at http://oshpd.ca.gov/FDD/Pre-Approval/special_seismic_cert_pre-approval.html

This OSP supplements ClimateCraft, Inc.'s current listing by Seismic Source Company, an ICC Accredited Listing Agent, for compliance to the seismic requirements of the International Building Code (IBC) versions 2000, 2003, 2006 & 2009. These code requirements have been adopted by all 50 states in the U.S. This powerful combination of qualifications gives architects, engineers, and owners confidence at the very start of the design process that their project will comply with critical IBC, CBC, and OSHPD seismic requirements for any project in the U.S.

For more information on how this capability can satisfy your facility needs, contact your local ClimateCraft sales representative. www.climatecraft.com
